

TCL Practical Problem Statements

Problem 1 — COMMIT

Customer with order_id = 101 received the product successfully.
Update the order status from Pending to Delivered and permanently save the changes using TCL commands.

Problem 2 — ROLLBACK

By mistake, ₹3000 was reduced from the total_amount of order 102.
Undo the transaction using TCL commands.

Problem 3 — SAVEPOINT

For order 103:

1. Change order status to Shipped
2. Increase total amount by ₹500

After updating total amount, company decided not to apply extra charges.
Rollback only the amount update using SAVEPOINT.

Problem 4 — Multiple Updates Transaction

For customer order 104:

1. Change order status to Delivered
2. Reduce total amount by 10% discount

If both queries execute successfully, permanently save changes.

DCL Practical Problem Statements

Problem 1 — GRANT SELECT

Create a new user named `analyst_user` and give only SELECT permission on `employee_records` table.

Problem 2 — GRANT Multiple Permissions

Create a user named `hr_manager` and give:

- SELECT
- INSERT
- UPDATE

permissions on `employee_records` table.

Problem 3 — REVOKE Permission

Remove UPDATE permission from `hr_manager` user on `employee_records` table.

Problem 4 — Full Access Control

Create a user named `admin_test` and:

1. Give ALL PRIVILEGES on `employee_records`
2. Then remove all permissions from that user using REVOKE.
