

SQL INDEXES PRACTICE QUESTIONS

1. Retrieve employee details whose emp_name is:
'Employee_95000'
2. Create a NON-CLUSTERED INDEX on emp_name column and compare query execution time before and after index creation.
3. Create a COMPOSITE INDEX on:
department, city

Then retrieve employees working in:
department = 'IT'
AND city = 'Bangalore'
4. Create a UNIQUE INDEX on email column and try inserting duplicate email values.
5. Find employees whose salary is greater than 70000 before and after creating index on salary column.
6. Retrieve all employees ordered by salary and analyze whether index improves performance.
